

Invesco Global Investment Grade Corporate Bond Fund

Important information

- The Fund invests primarily in investment grade corporate bonds and intends to achieve, in the medium to long term, a competitive overall investment return with relative security of capital in comparison to equities.
- Investors should note the liquidity risk, concentration risk of investing in investment grade corporate bonds, volatility risk, risk associated with investments in debt instruments with loss-absorption features including senior non-preferred debts, contingent convertible bonds which are subject to the risk of being written down or converted to ordinary shares upon the occurrence of pre-defined trigger events and may result in a significant or total reduction in the value of such instruments, currency exchange risk, RMB currency and conversion risks of RMB hedged share classes, credit rating risk, general investment risk.
- Investment in bonds or other fixed income securities is subject to (a) interest rate risk (b) credit risk (including default risk, downgrading risk and liquidity risk) and (c) risks relating to high yield bonds/non-investment grade bonds and/or un-rated bonds.
- Financial derivative instruments (FDI) may be used for efficient portfolio management and hedging purpose and for investment purposes. Risks associated with FDI include counterparty/credit risk/liquidity risk, valuation risk, volatility risk and over-the-counter transaction risk. As a result of the use of FDI for investment purposes, investors should note the additional/high leverage risk. Also, the active FDI positions implemented by the Fund may not be correlated with its underlying securities positions held by the Fund which may lead to a significant or total loss to the Fund.
- For certain share class(es), the Fund may at discretion pay dividend out of the capital and/or effectively out of capital amounts to a return or withdrawal of part of an investor's original investment or from any capital gains attributable to that original investment. Any such distributions may result in an immediate reduction of the net asset value per share in respect of such share class after the monthly distribution date. (Note 1)
- In addition, investors of Monthly Distribution-1 share class that are currency hedged (MD-1 hedged) should be aware of the uncertainty of relative interest rates. The net asset value of the MD-1 hedged may fluctuate and may significantly differ from other unit class due to fluctuation of the interest rate differential between the currency in which the MD-1 hedged is denominated and the base currency of the Fund and may result in a greater erosion of capital than other non-hedged unit class. (Note 2)
- The value of the Fund can be volatile and could go down substantially.
- Investors should not base their investment decision on this material alone.

A unique thematic approach to invest in high quality fixed income with attractive valuations

- ▷ High Quality & Diversified Portfolio

03

Central bank
support

Major central banks and governments have announced monetary and fiscal measures supporting the economies.

IG corporate bonds, a key beneficiary of these measures, saw inflows following central bank announcements. The trend is expected to continue.

Country	Supportive Measures
US	Unlimited QE Expect the Fed to purchase half of all new IG corp bond issuance in 2020
Europe	Over EUR 1 trillion in QE
China	Cut lending rate and RRR
UK	£200bn QE announced. Cut interest rates to 0.1% . Another £200bn expected later in 2020. Launched a £330 billion loan scheme for corporates

^{^^^}Source: Invesco as at June 30, 2020. **Past Performance is not a guide to future returns.**

Annualized dividend (%) = (Fixed Amount per month X 12) / Price on record date. Upon dividend distribution, the Fund's net asset value may fall on the ex-dividend date. All distributions below USD 50 in value (or its equivalent) will be automatically applied in the purchase of further shares of the same class. Positive distribution yield does not imply a positive return.
